Introduction

VirtualBox is a robust and open-source virtualization tool that enables users to run multiple operating systems on a single physical machine. This guide will walk you through the process of installing Ubuntu on the new updated version of VirtualBox. By following these steps, you can create a virtual machine (VM) and install Ubuntu, allowing you to explore and utilize the Linux environment without affecting your host operating system.

Prerequisites

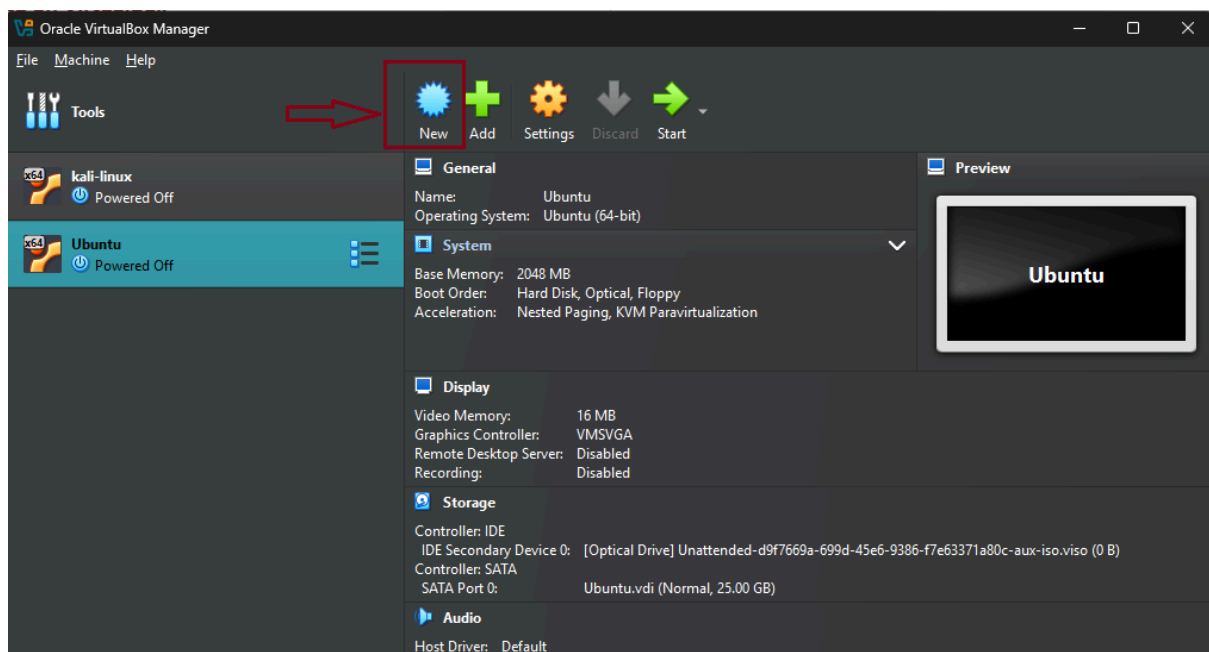

Before starting, ensure the following:

- - Oracle VM VirtualBox is installed on your computer.
- - Ubuntu ISO file (You can download it from: <https://ubuntu.com/download>).
- - Minimum 4GB RAM and 25GB free disk space for optimal performance.

Steps to Install Ubuntu on VirtualBox

Step 1: Create a New Virtual Machine

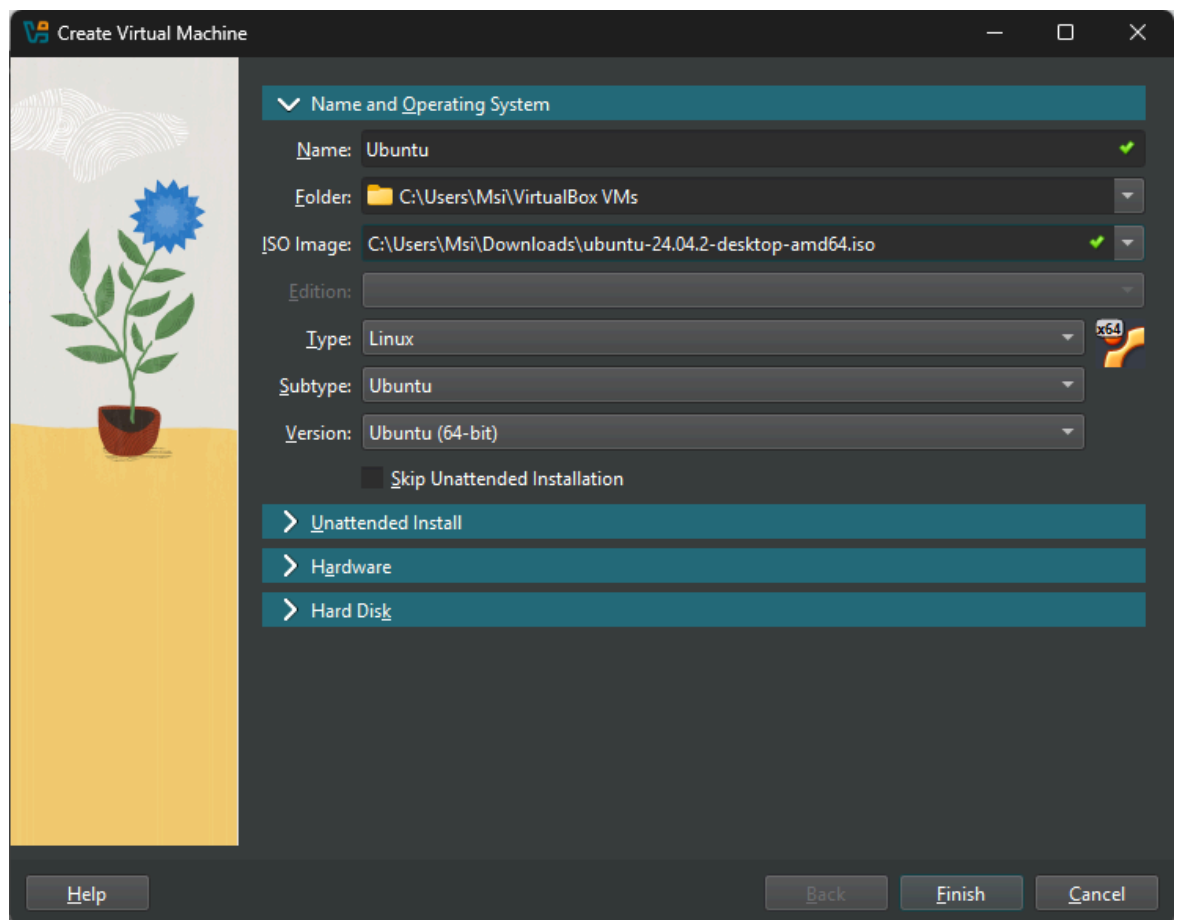

1. **Open VirtualBox:** Launch VirtualBox from your applications menu.
2. **Create a New Virtual Machine:** Click on the "New" button to create a new virtual machine.

Step 2: Configure the Virtual Machine

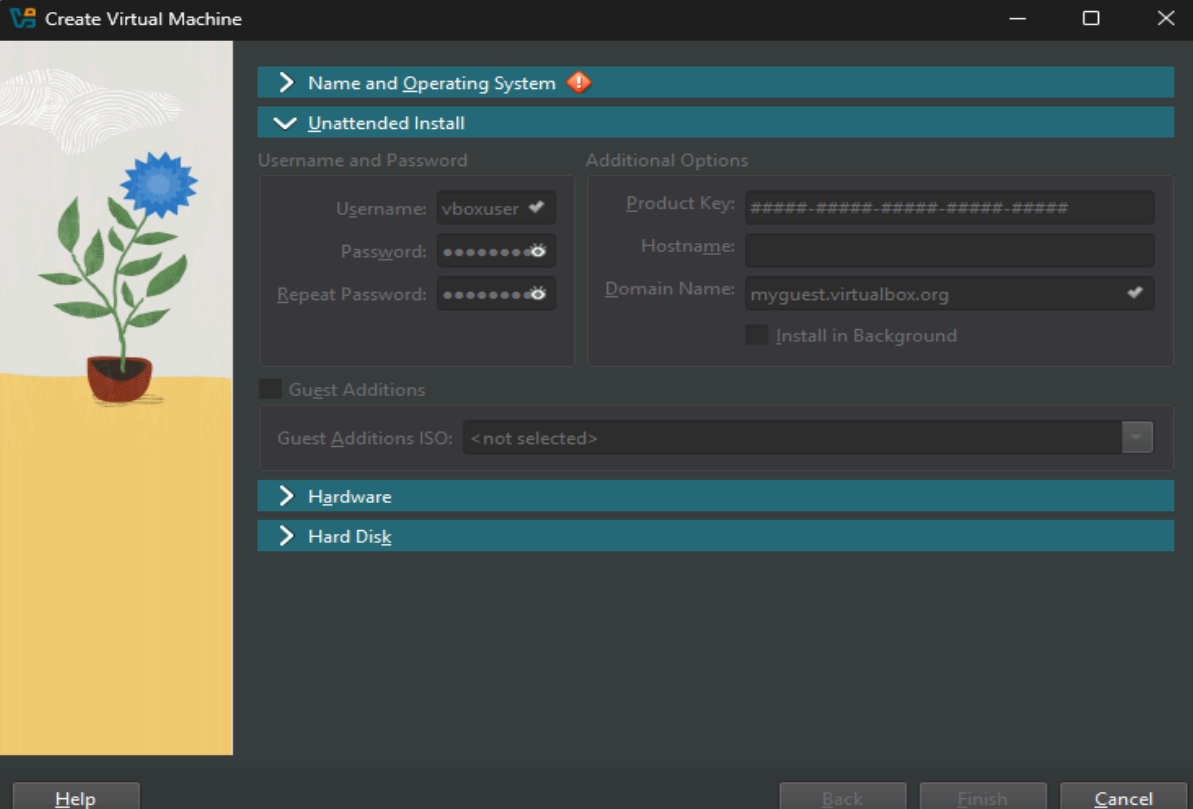

1. Name and Operating System

- **Name:** Enter a name for your virtual machine.
- **Folder:** Choose a location to save your virtual machine files.
- **ISO Image:** Click on the folder icon to browse and select the Ubuntu ISO file you downloaded.
- **Type:** Select "Linux".
- **Version:** Select "Ubuntu (64-bit)" or the appropriate version for your ISO.

2. Unattended Install

- **Username and Password:** Enter a username and password for the Ubuntu installation.
- **Additional Options:** Fill in the product key, hostname, domain name, and other optional fields if needed.
- **Guest Additions ISO:** You can select the Guest Additions ISO if you have it.

The screenshot shows the 'Create Virtual Machine' window in Oracle VM VirtualBox. The window has a dark theme and a sidebar on the left with a decorative image of a blue flower in a red pot. The main area is titled 'Create Virtual Machine' and contains several tabs: 'Name and Operating System' (selected), 'Unattended Install', 'Hardware', and 'Hard Disk'. The 'Unattended Install' tab is active, showing fields for 'Username and Password' and 'Additional Options'. The 'Username' field is set to 'vboxuser'. The 'Password' and 'Repeat Password' fields are masked with dots. The 'Product Key' field is set to '#####-#####-#####-#####-#####'. The 'Hostname' field is empty. The 'Domain Name' field is set to 'myguest.virtualbox.org'. There is a checkbox for 'Install in Background' which is unchecked. Below these fields is a section for 'Guest Additions' with a dropdown menu for 'Guest Additions ISO' set to '<not selected>'. At the bottom of the window are buttons for 'Help', 'Back', 'Finish', and 'Cancel'.
